

الجامعة الألمانية الأردنية
German Jordanian University

German Jordanian University

**School of Applied Technical Sciences
Department of Mechatronics Engineering
Bachelor of Science in Mechatronics
Engineering**

Dual Study Plan 2023

I. Program Objectives

Mechatronics Engineering program emphasizes the application of technologies and tools in the short term, and the ability to discover, acquire, and adapt new knowledge and skills in the long term, such that our graduates are prepared to:

- a. Pursue a successful professional career in local, German, and international markets or higher studies in the different fields of Mechatronics Engineering.
- b. Provide students with a strong foundation in the fundamentals of Mechanical, Electrical, and Computer Engineering and their integration in state of art technologies.
- c. Define, design, model, analyze, test, and incorporate principles of Mechatronics and systems engineering.
- d. Employ mathematical, computational, and experimental techniques, and interpersonal and critical thinking skills in solving practical problems in the diverse fields of Mechatronics and multidisciplinary Systems Engineering.
- e. lead/manage design, development of strong practical experience obtained through solid hands-on learning methodologies.
- f. Communicate effectively and function in various multidisciplinary and culturally diverse teams and engage in life-long learning and professional development.
- g. Understand the ethical, cultural, and environmental considerations of the Mechatronics Engineering.

II. Learning Outcomes

Mechatronics Engineering provides bachelor's students with an understanding of concepts, methodologies, and technologies as demonstrated by:

- a. Apply knowledge of mathematics, science and mechatronics engineering to the solution of problems particularly in the areas of mechatronics systems and subsystem integration.
- b. Design and conduct experiments in addition to analyzing, interpreting resulting data.
- c. Formulate engineering problems and use modern computer tools.
- d. Thrive in a team environment and understand ethical responsibility.
- e. Demonstrate knowledge and technical skills of key mechatronics specialties needed in Jordan and the region.

Course Delivery Methods

Courses are in one of the following three methods:

- **Face-to-Face (F2F) Method**

Courses that are taught through face-to-face learning and are delivered at the university campus.

- **Blended (BLD) Method**

Courses in which teaching consists of face-to-face learning and asynchronous E-learning. The face-to-face learning takes place at the university campus. Asynchronous E-learning takes place through activities, tasks, educational duties, and assignments through the virtual E-learning platforms (Moodle and MyGJU) without direct meetings with course instructors.

- **Online (OL) Method**

Courses in which teaching consists of synchronous E-learning and asynchronous E-learning. Synchronous E-learning takes place through interactive virtual meetings between instructors and students directly through the virtual E-learning platform (MS Teams). The asynchronous E-learning takes place through activities, tasks, educational duties, and assignments through the virtual E-learning platforms (Moodle and MyGJU) without direct meetings with course instructors.

III. Admission Requirements

To apply for admission, the following minimum requirements must be met:

- a. A minimum GPA of 80% in the National High School Certificate or equivalent.
- b. Sitting university placement tests.
- c. Sitting for the German Language Intensive course offered by the university.

Placement Tests

Applicants must sit for placement tests in the Arabic Language, the English Language, and Mathematics to determine whether the applicant may be required to take remedial courses in the mentioned subjects. Depending on or the applicant scores in the placement tests, some of the following 3-credit-hour remedial courses are required:

Course ID	Course Name	Credit Hours	ECTS	Contact Hours		Type	Prerequisites / Corequisites
				Lect.	Prac.		
ARB0099	Elementary Arabic	3	3	3	-	OL	Placement test
ENGL0098	Elementary English	3	3	3	-	F2F	Placement test
ENGL0099	Intermediate English	3	3	3	-	F2F	ENGL0098
MATH0099	Pre-Math	3	3	3	-	OL	Placement test
Total		12	12	12	0		

- Remedial courses are to be completed and passed within the first year of enrollment.
- Passing grade of remedial courses is 60%.
- ECTS (B.Sc.): is the European Credit Transfer System, and Accumulation System, One ECTS is equivalent to 30 actual workloads hours.

IV. Degree Requirements

The requirements to obtain a B.Sc. degree in Mechatronics Engineering are the following:

- a. A total of 173 credit hours of compulsory and elective courses, and practical training.
- b. A minimum of 12 credit hours of elective courses are to be taken at a partner university in Germany.
- c. A minimum of 20-week of International Internship at a company in Germany.

V. Framework for B.Sc. Degree (Credit hours)

Classification		Credit Hours			ECTS		
		Compulsory	Elective	Total	Compulsory	Elective	Total
University Requirements	Compulsory	21	-	21	25	-	25
	Dual Study	6	-	6	12	-	12
School Requirements		46	-	46	79	-	79
Program Requirements		88	12	100	164	20	184
Total		161	12	173	280	20	300

Course Delivery Method	Credit Hours	Percentage
Online Courses	18	10%
Blended Courses	60	35%
Face-to-Face Courses	95	55%
Total	173	100%

1. University Requirements: (27 credit hours)

1.1. Compulsory: (21 credit hours)

Course ID	Course Name	Credit Hours	ECTS	Contact Hours		Type	Prerequisites / Corequisites

VI. Compulsory Courses Offered by Mechatronics Department

VII.

ME0111 Computer Aided Engineering Drawing	2 Cr Hr (0,6)	4 ECTS
--	----------------------	---------------

The use of computer aided software in drawing such as AutoCAD. Geometric construction. Orthographic and Isometric projections; Sketching, sectioning, dimensioning and layering. Model layout (wire-frame, surface, and solid modeling), plotting to scale, blocks and attributes, Introduction to descriptive geometry, perspective drawing, engineering applications.

Prerequisites: CS116

ME0214 Electronics for Mechatronics	3 Cr Hr (3,0)	5 ECTS
--	----------------------	---------------

Introduction to (semiconductor) electronic devices. Semiconductor p-n junction, the transistor. Analysis and synthesis of linear and nonlinear electronic circuits containing diodes and transistors. Elementary analog circuit analysis. Fundamentals of transistors and voltage amplification. Characterization of MOS transistors for circuit simulation. Common-source amplifiers, MOSFET source-follower buffer stage, differential amplifier stage, and MOSFET current sources. Operational amplifiers. Development of a Basic CMOS Operational amplifier.

Prerequisites: ARB0099, ENGL0099, ENE211

ME0224 Computer Aided MATH for ME	2 Cr Hr (0,6)	4 ECTS
--	----------------------	---------------

Introduction to Matlab/Simulink, introduction to LabVIEW, introduction to Python with engineering applications including practical exercises.

Prerequisites: ARB0099, ENGL0099, MATH102, CS116

ME0312 Microcontrollers and IoT	4 Cr Hr (3,3)	6 ECTS
--	----------------------	---------------

Embedded systems characteristics. Microprocessors versus micro-controllers. Micro-controller characteristics. General-purpose micro-controllers. Interrupts, counters/timers, Input/output ports. Micro-controller programming. Instruction set. Program development and use of assemblers. Memory maps and addressing modes. Digital to analogue and analogue to digital conversion in micro controllers. Data acquisition and distribution. Serial and parallel communications. Real-time system and its constraints. Interfacing to external devices. Power consumption consideration. Introduction to the Internet of Things (IoT); IoT concepts, IOT hardware and software, IOT communication and networking protocols, as well as the integration with embedded systems in networked control systems. Experiments using both simulation and practical implementation of the basic building blocks of a micro-controller including timers, counters, PWM generation, I/O techniques and requirements, A/D conversion, and serial communications. Experiments to explore the system design process using the hardware-software co design process as well as the use of IOT in control and communication networks

Prerequisites: CE212

ME0344 Control Systems I	3 Cr Hr (3,0)	5 ECTS
---------------------------------	----------------------	---------------

Modeling of dynamic systems, linearization of nonlinear systems, transient response, transfer function, block diagrams, steady state error and stability, root locus, PID control, lead, lag, and leadlag control, Bode plots, and Nyquist stability criterion.

Prerequisites: MECH2104, MATH205, ENE211, ME0224

ME0345 Control and Vibration Lab	1 Cr Hr (0,3)	2 ECTS
---	----------------------	---------------

Free vibration of simple mass-spring systems, free damped response of simple mass-spring-damper systems, static and dynamic balancing, harmonically excited systems, frequency response of the harmonically excited systems, frequency response with base excitation, introduction to Control, mass spring-damper system

simulation, PID Controllers, simple and inverted pendulum control, fluid level and temperature control, servo systems, and twin rotor control.

Prerequisites: ME0344

ME0348 Sensors **3 Cr Hr (3,0)** **5 ECTS**

Introduction to instrumentation, units, dimensions and standards. Detailed analysis for error in measurements and statistical analysis of experimental data. The use of Op-Amp circuits in instrumentation. Introduction to sampled data analysis, data acquisition techniques, digital to analogue and analogue to digital conversion. Overview of sensors and transducers including physical principles, technical characteristics, application scenarios. Integration of sensors into PLC, LABVIEW and computer-based solutions including processing and monitoring techniques with emphasis on practical/industrial applications.

Prerequisites: ENE211, ENE213, MATH205

ME0354 Actuators **3 Cr Hr (3,0)** **6 ECTS**

DC and AC Electromechanical Actuators. Principles for Electromagnetic actuating circuits, Torque production, and Energy conversion. Conventional DC motors including Brushed/Brushless DC Motors, DC Servo Motors and Stepper Motors. DC Motor drives including power amplifiers and PWM amplifiers for position-controlled actuators. AC Motors including synchronous and induction motors: analysis, performance characteristics, and applications. Overview of AC Motor Drives and Speed Control. Interfacing actuators to computer-based controllers including PLC and LABVIEW.

Prerequisites: ME0348

ME0355 Sensors and Actuators Lab **1 Cr Hr (0,3)** **0 ECTS**

Measurements with different micrometers & Vernier measuring instruments, angular measurements, roundness & concentricity of cylindrical work pieces, tool maker's microscope, optical projectors, surface measurements. Analysis of experimental data and error estimation. Basic electrical measurement and sensing devices: physics of electric, magnetic, chemical sensors, displacement, area, pressure, flow, temperature, thermal and transport properties, force, torque and strain measurements. Smart sensors and networking of sensor systems. Data acquisition and processing. Transformer characteristics. Experiments for interfacing sensors and actuators with computer-based solutions. Testing and operational characteristics of different types of DC motors. Testing and operational characteristics of alternators. Testing and operational characteristics of induction motors. Modeling and simulation of electrical machines using Simulink with external mechanical loads.

Prerequisites: ME0348

Corequisites: ME0354

ME0491 International Internship **12 Cr Hr (3,0)** **30 ECTS**

Twenty-weeks of internship at a company in Germany.

Prerequisites: ME0391, Dept. Approval

ME0522 Hydraulics and Pneumatics **3 Cr Hr (2,3)** **4 ECTS**

Pneumatic and hydraulic components; compressor, cooler, compressed-air containers, filters, valves, pumps, piping system basic circuits in pneumatics and hydraulics, design and simulation of pneumatic and hydraulic circuits, servo pneumatics and servo hydraulics, basics of servo drives, assembling, measuring techniques.

Prerequisites: MECH0223

ME0548 Control Systems II **3 Cr Hr (3,0)** **5 ECTS**

State-space modeling of multi-variable systems, stability, sensitivity, controllability, and observability, optimal observers, Kalman filter, linear quadratic regulators, digital control systems, z-transform, stability, transient response, digital cascade compensators.

Prerequisites: ME0344

ME0551 Robotics **3 Cr Hr (3,0)** **5 ECTS**

Planar and spatial transformations, forward and inverse kinematics, trajectory planning, robot dynamics, robot control (linear, nonlinear, and force control), mobile robots and navigation. Robot control architectures and programming

Prerequisites: ME0344

ME0561 Mechatronics Systems Design and Interfacing **3 Cr Hr (2,3)** **5 ECTS**

Design and planning of the system, purchase (virtual) of different components, sensors and actuator units, machine parts, devices, electric, mechanical, pneumatic, hydraulic components, PLC and control units, assembly, commissioning, interfacing, software and programming, calibration, standard checks, test operation, troubleshooting, documentation, service and maintenance, safety, cost, delivery and disassembly and packing. Course to include communication protocols USB, I2C, Serial, etc...

Prerequisites: ME0312, ME0344, ME0354

ME0571 Machine Intelligence I **3 Cr Hr (3,0)** **5 ECTS**

This course introduces the student to intelligent control theory. Focus on highlighting the differences between classical and intelligent control techniques. The course material is divided in two main parts: Artificial Neural Networks and Fuzzy Logic Control techniques. Emphasis is provided for intelligent control applications of mechatronic systems. This include Dynamic system identification using neural networks and neuro-fuzzy systems as well as simulating different types of intelligent controllers such as neural, fuzzy, and neuro-fuzzy controllers for Mechatronic system applications and designs. The course includes implementing intelligent modeling and control algorithms using MATLAB Simulink and MATLAB Fuzzy and Neural Network Toolboxes. Introduction to intelligent adaptive control using reinforcement learning will be highlighted and discussed. A major hands-on project is integrated within the structure of the class to provide hands-on experience for students on mechatronic systems using methods presented in the class.

Prerequisites: ME0344, ME0348

ME0572 Machine Intelligence II **3 Cr Hr (3,0)** **5 ECTS**

Artificial Intelligence in Computer Vision with emphasis on visual recognition tasks such as image classification and object detection for mechatronic systems. Applications span examples in search, image understanding, apps, mapping, medicine, drones, and self-driving cars. Recent developments in neural network approaches have greatly advanced the performance of these state-of-the-art visual recognition systems. The course provides a deep dive into details of neural network based deep learning methods for computer vision. Students will learn to implement, train and debug their own neural networks and gain a detailed understanding of cutting-edge research in computer vision. Focus will be given to learning algorithms, neural network architectures, and practical engineering tricks for training and fine-tuning networks for visual recognition tasks with emphasis on state of art mechatronic Systems including ground, mobile robots, and manufacturing systems.

Prerequisites: ME0344

ME0577 Automation and Industry 4.0 **3 Cr Hr (2,3)** **5 ECTS**

Introduction to production concepts, serial production lines, assembly systems and types of automation. Programmable Logic Controllers (PLC); Theoretical and applied material, including: application and hardware composition of programmable logic controllers; functional programming blocks such as logic gates including

AND, OR etc. as well as latches, timers, counters, and analog blocks; design approaches based on Boolean and structured logic, state machines, flowcharts; programming methodologies including: ladder diagrams, blocks and text-based. Concepts and definitions for Industry 4.0 approaches, Industry 4.0 and the Future of Production. Smart Factory Architecture and overview of Smart Production Systems and Integrated production technology. Enabling technologies for Industry 4.0. Industrial Internet of Things (IIoT) for production systems. The class will address challenges of security and vulnerability, authentication and authorization, data/device security and cloud computing.

Prerequisites: ME0571

ME0591 Graduation Project I	1 Cr Hr (0,3)	4 ECTS
------------------------------------	----------------------	---------------

The first part of a team-based one-year senior design project in the field of mechatronics engineering.

Prerequisites: ME0491, MIN 132CrHr

ME0592 Graduation Project II	3 Cr Hr (0,9)	6 ECTS
-------------------------------------	----------------------	---------------

The second and final part of a team-based one-year senior design project in the field of mechatronics engineering.

Prerequisites ME0591

I. Elective Course Offered by Mechatronics Department

ME0402 Advanced Electronics	3 Cr Hr (3,0)	5 ECTS
------------------------------------	----------------------	---------------

Physical principles and operational characteristics of advanced semiconductor electronic devices with emphasis on metal-oxide systems, bipolar, high-electron mobility, and field-effect transistors. Topics also include quantum point contact and tunneling devices. Advanced background in solid-state electronic devices intended to help students to continue advanced research in the variety of different branches of semiconductor microelectronics.

Prerequisites: BSC001

ME0403 Real-Time Computer Control Systems	3 Cr Hr (3,0)	5 ECTS
--	----------------------	---------------

Review of continuous control. Dynamic response, Feedback properties, Root locus and frequency response designs. Introduction to digital control. Discrete system analysis. Difference equations, discrete transfer functions, z-transform, Discrete signal analysis. Discrete approximation of differential equations, Effects of Sampling, PID control in discrete systems. Sampled-data systems. Sample & Hold, Spectrum of sampled signals, Data extrapolation, Block diagram analysis. Discrete equivalences. Numerical integration, Pole & zero mapping, Hold equivalence. Design using transforms techniques. Design by emulation, Design by root-locus, Design by frequency response. Implementation of Direct Digital Control algorithms. Implementation of the basic PID algorithm, Synchronization of the control loop, Timing Considerations in Implementation of Control Loops. Hard and soft real-time systems, Real-time scheduling theory, Deadlines in real-time control systems.

Prerequisites: BSC001

ME0404 Digital Control Systems	3 Cr Hr (3,0)	5 ECTS
---------------------------------------	----------------------	---------------

Discrete time control theory, z-transform, sampling and hold operations, A/D and D/A conversions, modeling of digital systems, response evaluation; stability, basis of digital control, modeling of sampled-data systems, system identification using the batch least squares method, time response characteristics, stability analysis techniques, discrete-time approximation of continuous-time controllers, classical design methods based on root locus and frequency response, and modern design methods including state and observer feedback design.

Prerequisites: BSC001

ME0405 Process Control	3 Cr Hr (3,0)	5 ECTS
-------------------------------	----------------------	---------------

Dynamics of mechanical, food, beverage and chemical processes; system capacity; resistance; piping

complexes; characteristics and dynamics of control valves; control of pressure, speed, PH, mixing ration, Boolean algebra and fluid logic, sequential circuits, process time constants; proportional, reset, and derivative control actions; feedforward and cascade control; direct digital control.

Prerequisites: BSC001

ME0406 CNC and Manufacturing Control **3 Cr Hr (3,0)** **5 ECTS**

Concepts and benefits of computer integrated manufacturing (CIM), design for manufacturing, computer-aided design, process planning, manufacturing (computer numerical control parts programming), and inspection, robots in CIM, production planning and scheduling in CIM, system integration.

Prerequisites: BSC001

ME0407 Linear Systems **3 Cr Hr (3,0)** **5 ECTS**

Review of matrix algebra. State-space description of dynamic systems: linearity, causality, time- invariance, linearization. Solution of state-space equations. Transfer function representation. Discrete-time models. Controllability and observability. Canonical forms and minimal-order realizations. Stability and pole placement. Linear quadratic control. Observer design.

Prerequisites: BSC001

ME0408 Mobile Robots **3 Cr Hr (3,0)** **5 ECTS**

Introduction to variety of autonomous mobile robots, wheeled robots, robot platforms and modeling, control structures, sensing & estimation, localization, motion planning and multi-robot systems. Students will build, experiment with, and compete with mini-mobile robots.

Prerequisites: BSC001

ME0409 Autonomous Systems **3 Cr Hr (3,0)** **5 ECTS**

Introduction to essential aspects of autonomous systems; mobility, flexibility, adaptability, intelligence, modeling, control, sensing and estimation, sensor fusion and data mining, localization and navigation, motion and action planning, scheduling and applications.

Notations and definitions, structure of mechatronics systems, modeling and simulation of mechanical, electrical, hydraulic, pneumatic and thermal subsystems, various mathematical forms of model descriptions, systems of differential equations, transfer functions, state space representations, multi- port systems, merging of models of subsystems into a model of a mechatronic system, linear graphs, bond graphs, multi-energy domain models, introduction and application of simulation software tools

Prerequisites: BSC001

ME0410 Process Automation **3 Cr Hr (3,0)** **5 ECTS**

Definition of industrial processes, structures and layout design, hierarchical concepts, comprehensive view of material, energy and information flow; structure, principles of task planning, placing and final reporting, use of knowledge-based systems for planning and optimization, modeling of product data, use of distributed data base systems.

Prerequisites: BSC001

ME0411 Industrial Robotics **3 Cr Hr (3,0)** **5 ECTS**

Basic robotics technology, application in manufacturing, manipulators and mechanical design, programming languages, intelligence, and control.

Prerequisites: BSC001

ME0412 Mechatronics of Smart Materials	3 Cr Hr (3,0)	5 ECTS
Properties of smart materials, classes of smart materials, shape memory alloy materials, piezoelectric materials, smart sensors, smart actuators, and mechatronics of smart materials: modeling, design, digital control, and their applications.		
<i>Prerequisites: BSC001</i>		
ME0413 Mechatronics Projects	3 Cr Hr (3,0)	5 ECTS
Implementation of a mechatronics projects through all stages of modeling, simulation, control, component interface, signal conditioning, subsystem integration, documentation and presentation.		
<i>Prerequisites: BSC001</i>		
ME0415 Smart Sensors	3 Cr Hr (3,0)	5 ECTS
Active sensors: Piezo sensor for force, pressure and vibration, electrodynamic sensors for speed and rotation, photodiodes and thermocouples. Passive sensors: resistive sensors, capacitive sensors, inductance sensors. Analog data processing: operational amplifiers, amplification, addition, multiplication, division, integration and derivation, filtering. Digital data processing: data acquisition, multiplexing, digital filters, programmable devices. A/D-converter: bit-number, resolution, sampling rate, bipolar- and unipolar inputs. D/A-converters: flash, Weighing converter, Dual slope converter IOs, data lines.		
<i>Prerequisites: BSC001</i>		
ME0417 Micro-Electromechanical Systems	3 Cr Hr (3,0)	5 ECTS
Introduction to micromachining processes; mechanical properties of materials used in micromechanical systems; design and fabrication of free standing structures; sacrificial and structural layers; finite element modeling; micromechanical components; solid lubrication of microbearings; special techniques: double-side lithography, anodic bonding, electro-chemical drilling, deep etching, LIGA process, laser microfabrication; influence of IC fabrication processes on the mechanical properties; applications in microdevices; simulation and packaging.		
<i>Prerequisites: BSC001</i>		
ME0418 Nano Systems	3 Cr Hr (3,0)	5 ECTS
Assembly, manipulation and control of materials at the atomic and molecular scale to fabricate structures, devices and systems that have novel properties and functionality.		
<i>Prerequisites: BSC001</i>		
ME0419 Autotronics	3 Cr Hr (3,0)	5 ECTS
Electronic control systems and component in motor vehicle sub-systems, motor vehicle mechanical systems and sub-systems, electrical and electronic principles, faults and diagnosis of automotive electronic systems, engine management, fuel injection, electronics, transmission, stability, and ABS controls.		
<i>Prerequisites: BSC001</i>		
ME0420 Special Topics in Electrical and Electronics Engineering	3 Cr Hr (3,0)	5 ECTS
A course on a special topic in Electrical and Electronics.		
<i>Prerequisites: BSC001</i>		
ME0421 Special Topics in Control Engineering	3 Cr Hr (3,0)	5 ECTS
A course on a special topic in Control Engineering.		
<i>Prerequisites: BSC001</i>		
ME0422 Special Topics in Robotics and Automation	3 Cr Hr (3,0)	5 ECTS

A course on a special topic in Robotics and Automation.

Prerequisites: BSC001

ME0423 Special Topics in Computer and Digital Sciences **3 Cr Hr (3,0)** **5 ECTS**

A course on a special topic in Computer and Digital Sciences.

Prerequisites: BSC001

ME0424 Special Topics in Mechatronics Technology **3 Cr Hr (3,0)** **5 ECTS**

A course on a special topic in Mechatronics Technology.

Prerequisites: BSC001

ME0425 Special Topics I **3 Cr Hr (3,0)** **5 ECTS**

A course on a special topic in mechatronics.

Prerequisites: BSC001

ME0426 Special Topics II **3 Cr Hr (3,0)** **5 ECTS**

A course on a special topic in mechatronics.

Prerequisites: BSC001

II. Course Offered by Other Departments

IE0121 Probability and Statistics **3 Cr Hr (3,0)** **5 ECTS**

Descriptive statistics, probability concepts, discrete and continuous random variables and distributions, joint probability distributions, covariance and correlation of random variables, point and interval estimation for single sample, sampling distributions, and statistical inference for single sample.

Prerequisites: MATH101

IE0141 Engineering Workshop **1 Cr Hr (0,3)** **4 ECTS**

General safety, materials and their classifications, measuring devices and their accuracy, theoretical background and practical exercises including, carpentry, welding, mechanical fasteners, drills, lathes, milling machines, and sheet-metal working.

IE0281 Technical Writing and Engineering Ethics **2 Cr Hr (2,0)** **3 ECTS**

Technical communication, process of writing, presentations, relationship between ethical standards and technology, analysis of ethical dilemmas.

Prerequisites: ENGL1001

IE0361 Engineering Economics **3 Cr Hr (3,0)** **5 ECTS**

Principles of engineering economics, cost concepts, time value of money, interest formula, depreciation models, rate of return, cash flow, project evaluation methods, replacement analysis, break even analysis, economic studies for decision making.

Prerequisites: IE0121

IE0344 Manufacturing Processes **4 Cr Hr (3,3)** **6 ECTS**

Overview of typical manufacturing processes (Casting, forming, machining, joining, and finishing). Inhomogeneous deformation and residual stresses, Triaxial stresses and yield criteria, temperature rise, and process efficiency. Failure and fracture, surface properties and friction theories. Metal casting, heat transfer and solidification time. Bulk deformation processes (Forging, Rolling, Drawing, Extrusion), selected topics in joining and metal cutting processes. Economics and selection of manufacturing processes.

Prerequisites: Dept. Approval

MECH2102 Statics and Strength **3 Cr Hr (3,0)** **5 ECTS**

Vector mechanics of forces and moments and resultants, equilibrium of particles and rigid bodies in two and three dimensions, structural analysis, geometric properties, distributed forces, stress and strain, mechanical properties of materials, axial load, torsion, bending, transverse shear, combined loadings, stress and strain transformations, design of beams, column buckling.

Prerequisites: ARB0099, ENGL0099, PHYS103, MATH102

MECH0223 Thermofluids **3 Cr Hr (3,0)** **5 ECTS**

Properties of pure substances, Energy transfer, First law of Thermodynamics, Second law of Thermodynamics, Basic concepts of fluid mechanics, Bernoulli and Energy equation, Momentum equation, Flow in pipes, Mechanisms of Heat transfer.

Prerequisites: ARB0099, ENGL0099, MATH205

MECH0321 Thermofluids Lab **1 Cr Hr (0,3)** **2 ECTS**

Measurement of thermal conductivity, forced convection heat transfer, measurement of specific heat ratio, flow through nozzles, losses in pipes and fittings, hydrostatic pressure, impact of water jet, flow visualizations, performance of hydraulic positive displacement pumps.

Prerequisites: MECH0223

MECH2104 Dynamics **3 Cr Hr (3,0)** **5 ECTS**

Kinematics and kinetics of particles, planar kinematics and kinetics of rigid bodies, Newton's Second Law, Principle of work and energy, Principle of Impulse and momentum.

Prerequisites: ARB0099, ENGL0099, MECH2102

MECH0332 Machine Design **3 Cr Hr (3,0)** **5 ECTS**

Introduction to design process, design considerations, stress analysis and deflection of mechanical elements, energy methods, static strength and failure theories, fatigue strength and failure theories, shafts, nonpermanent joints, mechanical springs, and rolling bearings, CAD software, stress analysis using FEM codes, kinematics simulations, surface generation, 3D printing.

Prerequisites: MECH2104, MECH2102

MECH0402 Multi-Body Dynamics **3 Cr Hr (3,0)** **5 ECTS**

Principles of kinematics and dynamics in spatial motion, constraint equations describing various types of spatial kinematic joints, algorithms for automatic generation of the constraint equations, techniques for automatic generation of the spatial equations of motion.

Prerequisites: Dept. Approval

MECH0403 Machine Dynamics **3 Cr Hr (3,0)** **5 ECTS**

Force analysis of machinery, resonance (symptoms, tests, fixes), rotors dynamics, and dynamic balance of machinery, analytical determination of unbalance, dynamic behavior of drives and machine frames as complex systems, typical dynamic effects, such as the gyroscopic effect, damping and absorption, shocks.

Prerequisites: Dept. Approval

MECH0531 Mechanical Vibrations **3 Cr Hr (3,0)** **5 ECTS**

Mathematical techniques for linear system vibrations, review of vibrations of single-degree-of freedom

systems, vibrations of multi-degree-of-freedom systems, small oscillation theory, free vibration eigenvalue problem, undamped system response, viscously damped systems, vibrations of continuous systems, modes of vibration of strings, bars, and beams.

Prerequisites: MECH2104

III. Courses offered by Other Schools

ARB0099 Elementary Arabic **3 Cr Hr (3,0)** **3 ECTS**

This course aims to develop student's ability to read, comprehend, literary analyze, grammatically analyze, linguistically analyze, poetically analyze, and rhetorically analyze texts properly. The course also includes a selection of Arabic literature in poetry and prose representing different literary ages, in addition to several common forms of writing such as scientific article, news article, and others.

Prerequisites: Placement test

ARB100 Arabic **3 Cr Hr (3,0)** **3 ECTS**

This course aims to improve the student's competence in the various linguistic skills in terms of reading, comprehension, and taste. This is achieved through the study of selected texts with many implications that raise issues in spelling, grammar, composition, meaning, and inference, and the use of an old and modern thesaurus.

Prerequisites: ARB099

ENGL0098 Elementary English **3 Cr Hr (3,0)** **3 ECTS**

Students will focus on English at an elementary level concentrating on the receptive skills of reading and listening, and the productive skills of writing and speaking. These will include such things as independent clauses, verb tenses, model verbs, adverbs, short dialogues, reading simple material and answering short questions, writing short meaningful sentences, listening to short conversations.

Prerequisites: Placement test

ENGL0099 Intermediate English **3 Cr Hr (3,0)** **3 ECTS**

Students will focus on English at a pre-intermediate level concentrating on the receptive skills of reading and listening and the productive skills of writing and speaking. These will include such things as comparatives and superlatives, quantifiers, possessive adjectives and pronouns, vocabulary building, role-play activities for speaking, reading comprehension and writing short descriptive paragraphs.

Prerequisites: ENGL098

ENGL1001 Upper-Intermediate English **3 Cr Hr (3,0)** **3 ECTS**

Students will focus on English at an upper-intermediate level concentrating on the receptive skills of reading and listening and the productive skills of writing and speaking. Model verb review, silent letters and proper pronunciation, jobs and careers, requests and offers, more phrasal verbs with vocabulary building, relative clauses and relative pronouns, narrative tenses for writing exercises, wishes and regrets, reading and comprehending longer passages with direct and inference questions of medium difficulty, hypothesizing, and writing fully developed descriptive, argumentative and analytical essays of 350 words.

Prerequisites: ENGL0099

ENGL1002 Advanced English **3 Cr Hr (3,0)** **3 ECTS**

Students will focus on English at an Advanced level. Students will analyze and produce 2 – 3 page essays with an emphasis on argumentation and persuasion working both independently and cooperatively to gather, evaluate, and synthesize necessary information. Class activities include interactive lectures, small group and class discussions, informal debates, peer feedback, individual presentations, focused listening exercises and focused viewing exercises as well as assorted reading, writing, and grammar assignments. There will be some poetry analysis together with reading and understanding a short story and a drama using basic literary terms and concepts.

Prerequisites: ENGL1001

MILS100 Military Science **3 Cr Hr (3,0)** **2 ECTS**

History of the Jordanian Arab Army. United Nations Peace Keeping Forces. Preparation of the nation for defense and liberation. History of the Hashemite Kingdom of Jordan and its development.

NE101 National Education **3 Cr Hr (3,0)** **2 ECTS**

In a context of striving towards democracy like the one Jordan enjoys today, the meaning and practice of active

and responsible citizenship becomes more crucial. It is often argued that democracy requires “democrats” to flourish, and become well established. Democrats are those women and men who recognize pluralism, inclusion, positive engagement, and participation as the main values that govern their interaction with the state as citizens and with each other as diverse people of different interests. In this course you will be able to understand your rights and responsibilities as Jordanian citizen expand your knowledge about the frameworks, and processes that regulates citizen-state relationships as well as the basic necessary skills for you to practice your citizenship rights in a civic manner.

Prerequisites: ENGL0099

GERL101B1 German I B1-Track	3 Cr Hr (9,0)	6 ECTS
------------------------------------	----------------------	---------------

Can understand and use familiar, everyday expressions and very simple sentences, which aim at the satisfaction of specific needs. Can introduce oneself, and others, and ask others questions to themselves - e.g. where they live, which people they know or what kind of things they have - and can give answers on questions of this kind. Can communicate on a basic level if those involved with him/ her in a conversation speak slowly and clearly and are willing to help.

GERL102B1 German II B1-Track	3 Cr Hr (9,0)	6 ECTS
-------------------------------------	----------------------	---------------

Can understand sentences and frequently used expressions if those are connected with things of immediate meaning (e.g. information to the person and to the family, buying, work, closer environment). Can communicate in simple, routine situations, with the purpose of a simple and direct exchange of information about familiar and common things. Can describe with simple means their own origin and training, direct environment and things that are in connection with direct needs.

Prerequisites: GERL101B1

GERL201B1 German III B1-Track	3 Cr Hr (6,0)	4 ECTS
--------------------------------------	----------------------	---------------

Can understand the main points if no dialect is used and if it concerns familiar things about work, school, spare time etc. Can master most situations, which one encounters on journeys in a German speaking area. Can express oneself simply and coherently about familiar topics and areas of personal interest. Can report experiences and events, describe dreams, hopes and goals and give short reasons or explanations about plans and opinions.

Prerequisites: GERL102B1

GERL202B1 German IV B1-Track	3 Cr Hr (9,0)	6 ECTS
-------------------------------------	----------------------	---------------

Can understand the main contents of complex texts, as well as concrete and abstract topics; even discussions between specialists in his/ her own special field. Can communicate spontaneously and fluidly a normal discussion with native speakers, without larger effort on both sides. Can express oneself clearly, in detail in a broad spectrum of topics, describe a point of view to a current question, and indicate the pro and cons of different possibilities.

Prerequisites: GERL201B1

GERL301B1 German V B1-Track	3 Cr Hr (9,0)	6 ECTS
------------------------------------	----------------------	---------------

Can understand and seize implicit meanings of a broad spectrum of demanding, longer texts. Can express oneself spontaneously and fluidly, recognizing words without having to search for words frequently. Can use the language effectively and flexibly in social and vocational life or in training and study. Can express oneself clearly, structured and detailed, to complex subjects and use appropriate different means for linkage of texts.

Prerequisites: GERL202B1

GERL302B1 German VI B1-Track	3 Cr Hr (6,0)	6 ECTS
-------------------------------------	----------------------	---------------

German VI is a strongly practice-oriented course in preparation for your German Year. The course includes the modules "Intercultural Communication", "Job Application Training" and the technical languages. In part, it includes a special support program for students who did not achieve their language goal of a full B1 certificate in German V

Prerequisites: GERL301B1

CHEM103 General Chemistry	3 Cr Hr (3,0)	5 ECTS
Stoichiometry of formulas and equations. Gases and the kinetic-molecular theory. Quantum theory and atomic structure. The components of matter. The major classes of chemical reactions (precipitation, acid-base, oxidation-reduction, and reversible reactions). Thermodynamics: energy flow and chemical change. Quantum theory and atomic structure. Electron configurations and chemical periodicity. Kinetics: rates and mechanisms of chemical reactions. Equilibrium: The extent of chemical reactions. Acid-base equilibria.		
CS116 Computing Fundamentals	3 Cr Hr (3,0)	6 ECTS
Basic computer skill; Programming concepts; algorithms: data types, arithmetic, logical, relational, Boolean, and assignment operators, simple input and output statements; programming control structures; data structures: single and multidimensional arrays; character strings; functions; pointers; file structures and representation; 3-hours lab session every week to enhance hands-on experience on topics that are theoretically covered in the course using Gnu C compiler on a Solaris/Sun environment		
CS1160 Computing Fundamentals Lab	1 Cr Hr (0,3)	0 ECTS
Basic computer skill; Programming concepts; algorithms: data types, arithmetic, logical, relational, Boolean, and assignment operators, simple input and output statements; programming control structures; data structures: single and multidimensional arrays; character strings; functions; pointers; file structures and representation; 3-hours lab session every week to enhance hands-on experience on topics that are theoretically covered in the course using Gnu C compiler on a Solaris/Sun environment.		
<i>Corequisites: CS116</i>		
MATH0099 Pre-Math	3 Cr Hr (3,0)	3 ECTS
Real numbers and their properties, Solutions of equations and inequalities, Functions, Domain of functions, Operations on functions, Polynomials, Zeros of polynomials, Power, Exponential, Logarithmic, and Trigonometric functions and their graphs, Applications of trigonometry, Analytic Geometry: Lines, circles and parabolas.		
<i>Prerequisites: Placement test</i>		
MATH101 Calculus I	3 Cr Hr (3,0)	3 ECTS
Review of functions, functions, Inverse functions, Inverse trigonometric functions, the concept of limits, Computation of limits, Continuity, Asymptotes, The Derivative, Computation of derivatives, the product and quotient rules, The Chain Rule, Derivatives of Trigonometric, Inverse Trigonometric, Exponential, Logarithmic, and Hyperbolic Functions. Applications of Differentiation: Increasing and Decreasing Functions, Extrema of Functions, Graphs of Functions, Indeterminate Forms and L'Hopital Rule. Antiderivatives, Definite integrals, Fundamental Theorem of Calculus, Integration by Substitutions, Integration by Parts, Applications of integration: Area between curves, Arc length, Volume and Surface Area of Solids of Revolution.		
<i>Prerequisites: MATH0099</i>		
MATH102 Calculus II	3 Cr Hr (3,0)	5 ECTS
Review of Integration, Integration by Trigonometric Substitutions, Integration using Partial Fractions, Improper Integrals. Vectors in 2 and 3 Spaces, The Inner and Cross Products of vectors. Polar Coordinates, Graphs and Arc length of Polar curves. Functions of Several Variables; Domain, Limits, and Continuity. Partial Derivatives, The Chain Rule, The Gradient and Directional Derivatives, Extrema of Functions of Several Variables and Lagrange multipliers. Double Integrals, Area of Plane Region and Volumes of Solids using Double integrals, Triple Integrals, Cylindrical and Spherical Coordinates, Triple Integrals using Cylindrical and Spherical Coordinates.		
<i>Prerequisites: MATH102</i>		
MATH203 Applied Mathematics for Engineers	3 Cr Hr (3,0)	5 ECTS
Vector analysis in Cartesian coordinates. General Curvilinear Coordinates, Vector calculus in general curvilinear coordinates with emphasis on Spherical and Cylindrical coordinates, transformations between different coordinate systems, vector differentiation. Matrices and linear equations; Matrices and Linear Operators; Determinants, Eigenvalues and eigenvectors. Complex Numbers and Complex Variables; Representation of		

complex numbers, Powers and roots of complex numbers, Functions of a complex variable. Review of Infinite Series; Infinite series of constant terms, Convergence tests, Power series and radius of convergence, Taylor, and Maclaurin series and Fourier series.

Prerequisites: MATH102

MATH205 Differential Equations **3 Cr Hr (3,0)** **5 ECTS**

Ordinary differential equations; Sturm-Liouville theory, properties of Special Functions, Solution methods including Laplace transform, and Fourier transform. Eigenvalue problems and expansions in orthogonal functions. Partial differential equation: classification, separation of variables, solution by series and transform methods. Models in Applied Mathematics; Applications to illustrate typical problems and methods of applied mathematics in solid and fluid mechanics, fields of physics, deformation and vibration, wave phenomena, diffusion phenomena, heat conduction, chemical and nuclear reactors, and biological processes.

Prerequisites: MATH102

PHYS103 Physics I **3 Cr Hr (3,0)** **5 ECTS**

Physics and measurement. Motion in one dimension. Vectors. Motion in two dimensions. Force and motion. Kinetic energy and work. Potential energy and conservation of energy. Linear momentum and collisions. Rotation. Rolling and angular momentum.

PHYS104 Physics II **3 Cr Hr (3,0)** **5 ECTS**

Electric Fields. Gauss's Law. Electric Potential. Capacitance and Dielectrics. Current and Resistance. Direct Current Circuits. Magnetic Fields. Sources of Magnetic Field. Faraday's Law.

Prerequisites: PHYS103

PHYS106 General Physics Lab **1 Cr Hr (0,3)** **2 ECTS**

Laboratory exercises that apply physical principles introduced in Physics I and Physics II courses. The lab includes the use of data logging techniques, observations, and scientific reasoning in practical situations.

Prerequisites: PHYS103

Corequisites: PHYS104

CE441 Embedded System Design **3 Cr Hr (3,0)** **5 ECTS**

Embedded system concepts, hardware architecture, design and debugging, embedded processor selection, software development methodologies, real-time Linux, synchronization mechanisms, interrupt latency, application programming interface, interrupt service routine, application design considerations.

Prerequisites: ENE211, BM371, ME0312

BM371 Numerical Methods for Engineers **3 Cr Hr (2,3)** **5 ECTS**

This Module introduces the theory and application of numerical methods to approximate mathematical processes (such as reconstruction of a function, evaluation of an integral) or solutions of problems that arise in science and engineering. Such approximations are needed since the analytical methods are either unachievable or the problem under consideration cannot be solved exactly or analytically. Justifications for why and how these approximation techniques work are provided with emphasis on accuracy and efficiency of the developed methods.

Subjects covered by this module includes: Fundamentals of error analysis, numerical solutions of linear and nonlinear equations, numerical solution of system of equations, curve fitting, numerical integration and differentiation, numerical solution of ordinary differential equations.

Prerequisites: CS116, MATH203, MATH205

CE212 Digital Systems **3 Cr Hr (3,0)** **5 ECTS**

This course covers fundamentals of digital electronics, Binary number system; Boolean algebra, logic operations, algebra and gates, digital circuits analysis, gate-level and block level design of digital circuits, adders, subtractors, comparators, multiplexers, decoders, analysis, design and applications of sequential circuits: flip-flops, registers, counter, and their design procedures, RAM and ROM memory elements

CE2120 Digital Systems Lab **1 Cr Hr (0,3)** **4 ECTS**

This lab aims to enhance hands-on experience on topics that are theoretically covered in the CE212 digital systems course, including: fundamentals of digital electronics, Binary number system; Boolean algebra, logic operations, algebra and gates, digital circuits analysis, gate-level and block level design of digital circuits, adders, subtractors, comparators, multiplexers, decoders, analysis, design and applications of sequential circuits: flip-flops, registers, counter, and their design procedures, RAM and ROM memory elements. The experiments on all topics vary from functional troubleshooting to gate and block level design implementation.

Corequisites: CE212

CE331 Signals and Systems **3 Cr Hr (3,0)** **5 ECTS**

The module provides the mathematical foundation for processing continuous and discrete time signals in both time and frequency domains. The module helps build background for a wide range of applications such as analog and digital communications systems, image processing, and speech recognition. The concepts introduced in this course include linear time-invariant systems, Fourier transforms for continuous and discrete time signals, sampling, and Laplace transform. Course work will include Matlab assignments.

Prerequisites: ME0344

CE461 Image Processing **3 Cr Hr (3,0)** **5 ECTS**

This course provides a solid background in digital image processing. A major goal of the course is to introduce students to practical applications of image processing in both industry and research. The course includes three assignments and a project that will enable students to use MATLAB for image computation and visualization.

Prerequisites: MATH203, Math205, CE212

ENE211 Electrical Circuits I **3 Cr Hr (3,0)** **5 ECTS**

Overview: SI units, voltage and current; Ohm's and Kirchhoff's Laws, circuits with dependent sources; simple resistive circuits: series, parallel and delta to wye; Techniques of circuit analysis: nodal and mesh analyses, source transformation, Thevenin and Norton equivalents; Amplifiers; Inductance, capacitance and mutual inductance; Natural and step responses of RL and RC circuits; Natural and step response of series and parallel RLC circuits; Sinusoidal steady state analysis.

Prerequisites: PHYS104

ENE213 Electrical Circuits Lab **1 Cr Hr (0,3)** **2 ECTS**

Resistive circuits, Potentiometers, Superposition, Thevenin's theorem and maximum power transfer, RLC current and voltage characteristics, Frequency response of RL, RC and RLC circuits, Series and parallel resonant circuits, Amplifiers.

Prerequisites: ENE211

ENE312 Power Electronics **3 Cr Hr (3,0)** **5 ECTS**

Power semiconductor devices: types drive circuits, protection circuits and power loss calculations. AC-DC converters: uncontrolled, half-controlled and fully controlled single-phase and three-phase rectifiers. AC-AC converters: cycloconverters. DC-AC inverters: single-phase and three-phase. DC-DC converters' topologies analysis and design: stepdown, step-up, and step-down/up converters.

Prerequisites: ME0214

ENE314 Power Electronics Lab

1 Cr Hr (0,3)

2 ECTS

Single-phase fully controlled bridge rectifier with static and rotating loads. Single-phase half-controlled bridge rectifier. Three-phase controlled bridge rectifier. Single-phase ac voltage controller. Frequency converter. Single-phase bridge inverter with static and rotating loads. Three-phase bridge inverter. Step-down and step-up converter.

Prerequisites: ENE312
